| Abdominal Aortic Aneurism | Abdominal Ultrasound  
- Ages 65 – 75 who have ever smoked  
| Dyslipidemia              | Cholesterol panel  
- Every 5 years starting at age 30  
2013 ACC/AHA Guideline on the Treatment of Blood Cholesterol to Reduce Atherosclerotic Cardiovascular Risk in Adults.  
https://circ.ahajournals.org/content/early/2013/11/11/01.cir.0000437738.63853.7a.                                                                 |
| Osteoporosis              | DEXA Scan  
- At age 70  
- Screening before age 70 based on patient risk factors and provider discretion*  
- Osteopenic patients repeat every 2 years  
- Osteoporotic patients repeat every 5 years  
  *The FRAX tool can calculate an individual patient’s risk for osteoporotic fractures and can help guide these decisions.  
FRAX osteoporotic fracture risk assessment tool  
http://www.shef.ac.uk/FRAX/                                                                                           |
| Colorectal Cancer         | Colonoscopy  
- Every 10 years beginning at age 50, ending at age 75 (or more frequently depending on results of baseline test)  
Annual Fecal occult blood test (FOBT)  
- An acceptable, though less accurate alternative to colonoscopy  
- Start at age 50, end at age 75                                      | U.S. Preventive Services Task Force. Screening for colorectal cancer.

</table>
| **Hepatitis C Screening** | Screening should be considered for men considered to be at high risk of contracting Hepatitis C  
- All adults born between 1945-1965  
- Those who have past or present use of IV drugs  
- Those who request testing  
- Women who are pregnant or attempting conception who are high risk due to IV drug use, sexual intercourse with an IV drug user, HBV infection, or those who have traded sex for drugs or money.  
- Those who have exchanged sex for drugs or money  
- Those with any history of drug or alcohol abuse  
- Those with history of body piercing/tattoo with unsterile tattooing/piercing implements.  
- Adults who were born in Egypt  
|---|---|---|
| **HIV Screening** | Screening should be performed at least once for all men ages 15-65  
Screening should be considered for men considered high risk for HIV infection:  
- Men having unprotected intercourse with more than one partner  
- Men who exchange sex for drugs or money  
- Those with a history of or current IV drug use  
- Those seeking treatment for other STI  
- Those with a history of blood transfusion between 1978-1985
